- ReactJS

## Project title

Document management

## Vision

We would like to have a tool to help the government office manage documents.  
Documents can be versioned & tracked according to time.

## Recommended technical stack

- Java
- Relational database
- Spring Boot

## Project title

Employee Assessment system

## Vision

We would like to have a tool to help leader/manager (aka Supervisor) easily give performance assessment for their members.

Supervisor can give assessment bi-weekly, monthly, quarterly or yearly as needed.

The Supervisor can choose criteria that he/she want to focus on the assessment.

The System can keep track of employee's assessment history so that we can see his/her improvement over the time.

## Recommended technical stack

- Java
- Spring Boot

## Project title

Employees expense management

## Vision

We would like to have a tool to help finance department process expense requests from employees.

Employee can send expense request for spending on work activities. Eg. transportation, meals, stationery ...

Manager can confirm or reject the request.

Finance department can final approve then process payment or reject the request that is confirmed by employee's manager.

## Recommended technical stack
